[3] Waste (WS)

At the university, inorganic waste is usually recycled or disposed of.

For example, paper and cardboard can be recycled to produce new paper products. Glass can be recycled into new glass products. Plastic can be recycled into various materials such as plastic granules or fibers.

Waste from laboratories is collected in specially sealed containers, which are then sent for disposal due to safety requirements. Construction waste must also be collected separately and removed from the university grounds.

For the disposal of electronic waste (computers, monitors, printers), you should contact specialized companies licensed to work with hazardous waste. They are engaged in their safe recycling or disposal.

[3.7] Total volume of inorganic waste treated

Type of waste	amount (ton)				
	Total	reduced	reused	down-cycled	up-cycled
inorganic non-toxic	110	9	54		

- paper	60	5	30		
- soft plastic	22	2	16		
- hard plastic	20	2	8		
- etc	8				

Description:

The University pays great attention to the issues of ecology and sustainable development. One of the key aspects of this work is the management of inorganic waste. In this report, we will look at what measures are being taken at our university to treat inorganic waste.

1. Separate waste collection. The university has containers for various types of waste: paper, cardboard, plastic, glass, and metal, as well as special tanks for used batteries and lamps. This makes it possible to efficiently sort waste and send it for further processing or disposal.
2. Waste recycling. The University is actively implementing waste recycling programs such as paper, glass, and plastic. This not only helps to reduce waste but also helps to create a more sustainable environment.
3. Disposal of hazardous waste. Waste from laboratories is collected in special sealed containers and sent for disposal per safety requirements. For the disposal of electronic waste (computers, monitors, printers), the university cooperates with specialized companies licensed to work with hazardous waste.

4. Educational work. The University conducts events and information campaigns aimed at raising awareness among students and staff about the importance of proper waste disposal and its impact on the environment.

We strive to make our university an example of a responsible attitude to the environment. We will continue to work on improving the inorganic waste management system and introducing new practices that promote sustainable development.
