### [3] Waste (WS)

The University can carry out work on processing inorganic waste within the framework of the environmental protection program. Here are some possible directions for such work:

1. Collection and sorting. Organize collection points for various types of inorganic waste such as batteries, electronics, glass, plastic, etc. Staff and students can be trained to properly sort waste.
2. Cooperation with recycling companies. Enter into contracts with companies engaged in waste disposal and recycling to ensure their collection and further processing.
3. Educational events. To conduct lectures, seminars and master classes for students and university staff on the importance of waste recycling and how to implement it.
4. Research and development. To support scientific research and projects to develop new methods of processing inorganic waste or improve existing technologies.
5. Participation in environmental actions. Join local and regional environmental initiatives aimed at raising awareness of the problem of waste and recycling.
6. Partnership with local communities. Cooperate with local authorities, enterprises, and public organizations to create a more efficient waste management system.
7. Monitoring and evaluation of results. Track the amount of waste collected and recycled, as well as evaluate the effectiveness of ongoing activities.

It is important to note that the work of processing inorganic waste requires careful planning, coordination, and resources. However, it can become an important contribution of the university to environmental protection and the formation of an ecological culture among students and staff.

### [3.4] Inorganic Waste Treatment

UzSWLU (uzbekistan)

#### **Description:**

As part of the environmental protection and environmental culture improvement program, work was carried out among students and staff of the University on the collection, sorting and processing of inorganic waste.

#### **Collection and sorting:**

- Collection points are organized for various types of inorganic waste: batteries, electronics, glass, plastic, etc.
- Staff and students are trained in proper waste sorting.
- An information campaign was conducted among students and staff about the importance of waste sorting.

#### **Cooperation with recycling companies:**

- Contracts have been concluded with companies engaged in waste disposal and recycling to ensure their collection and further processing.
- Data on the amount of waste collected is provided for planning the work of recycling companies.

#### **Educational events:**

- Lectures, seminars and master classes were held for students and university staff on the importance of waste recycling and how to implement it.
- Students and staff received information on how to properly handle various types of waste and where they can be recycled.

### **Research and development:**

- Scientific research and projects aimed at developing new methods of processing inorganic waste or improving existing technologies are supported.
- The results of research and development can be used to improve the efficiency of waste recycling.

### **Participation in environmental actions:**

- The University has joined local and regional environmental initiatives aimed at raising awareness of the problem of waste and recycling.
- Information campaigns, waste collection, and recycling were carried out as part of the actions.

**Partnerships with local communities** local authorities, enterprises, and public organizations have made it possible to create a more efficient waste management system.

- The exchange of experience and knowledge has made it possible to improve waste management in the region.

During the reporting period, more than 10 tons of inorganic waste were collected and transferred for recycling, which contributed to reducing the environmental burden and improving the environmental situation in the region. Work on waste collection and recycling will continue in the next period.
