**[1] Setting and Infrastructure (SI)**

Today, the urban environment is the place of residence for the majority of the population of modern industrial and post-industrial states, therefore much attention is paid to reducing the technogenic load in the urban environment. Considering that university campuses occupy large areas within the city, the environmental parameters of the functioning of these large economic entities play a large role in shaping the city's environment, therefore the greening of the university campus makes a significant contribution to solving urban environmental problems.

**[1.11] Total area on campus for water absorption besides the forest and planted vegetation (meter<sup>2</sup>)**

Street 1	Street 2
<b>Total area on campus for water absorption besides the forest and planted vegetation (UZSWLU )</b>	

Total **water absorption** area 38 770 m<sup>2</sup>

Total Area: 166 000 m<sup>2</sup>

Percentage area: 30 %
