

## REPORT ON EVENTS

On 13<sup>th</sup> of March we did special occasion, devoted for spring holiday "Navruz"

Beforehand, there were several action and preparation which made us irritated and exhausted. We organised this event from the beginning till the end. It took a week to get prepared, but lasted an hour. We all acted as teachers and made school students be active in this event. It was the very first time to organise the whole event as a pedagogue. It is the best techs to prepare students in the events. We learnt how to use exist technology into instruction. We got students prepared for international dancing, singing, role-playing, acting. We chose the primary students for performance. When everything went wrong in preparation we were completely hopeless and nervous. But we tried several times and finally we managed to made ideal event. Moreover there were some problems in providing a technology like microphones and speakers. Fortunately, the boys of our group could fix these techs and made us happy. Via technological integration our event hold on successfully. And even all audience applaud us with full of satisfaction in their eyes. We used only one principle: "Do our best to make perfection" During rehearsal we listened to the student's opinions, took their comments into account and combining into one group with the students.

I learnt from the event much such as being tolerant, using technology well, only depending on myself, being confident and not paying attention on other bad comments. And I realised that without any technology we can not organise an important events.

I hope that all international and national scenes were presented satisfactory and received warmly by audience.
