[3.5–3.8] WS3 Organic Waste Treatment

Organic waste is generated primarily from university cafeterias, campus landscaping activities, and biodegradable materials from student dormitories. Data are compiled through the university's environmental monitoring system and verified using monthly waste collection records maintained by the Campus Management Division in cooperation with the Tashkent City “Maxsus Trans” Waste Management Company.

Organic Waste Composition (2026)

Source	Annual Volume
Food waste from university cafeterias	38 metric tons
Garden and landscaping residues	19 metric tons
Biodegradable dormitory waste	5 metric tons
TOTAL ORGANIC WASTE (2026)	62 metric tons

Organic waste is collected separately at designated collection points and transported to the university's composting facility. During 2026, approximately 51 metric tons (82%) were processed into organic compost, which is reused for maintaining university gardens, landscaped areas, and tree plantations.

Year-on-Year Comparison

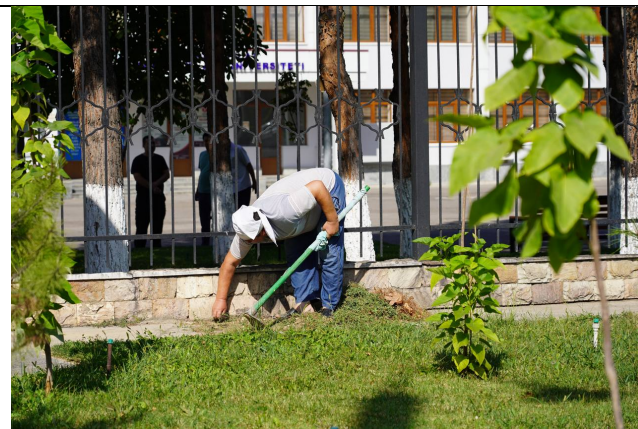

Reporting Year	Organic Waste Generated	Organic Waste Composted	Rate
2025	58 metric tons	40 metric tons	70%
2026	62 metric tons	51 metric tons	82%

Although the total volume of organic waste increased slightly compared with the previous reporting period (due to campus population growth), the proportion recovered

through composting increased significantly from 70% to 82%, demonstrating improved efficiency. The organic waste treatment system is coordinated by the Department of Natural Sciences and the Campus Management Division, using a controlled aerobic composting method.
