UZBEKISTAN STATE WORLD LANGUAGES UNIVERSITY

Measurement of University Water Consumption

SDG 6 Water consumption tracking | Reporting year 2025

Uzbekistan State World Languages University (UzSWLU) measures, as an institution, the total volume of water used across its buildings. Water is supplied from the Tashkent city mains by **Tashkent City Water Supply JSC (Toshkent shahar suv ta'minoti AJ)** under an annual service contract, and every volume delivered to the University passes through metered connection points.

How water use is measured

Water accounting is the responsibility of the Environment and Energy unit of the Department of Administrative Affairs, whose functions include water, electricity and heat supply, metering, and efficiency-oriented modernization. Meter readings are recorded monthly and reconciled with the volumes invoiced by the city utility.

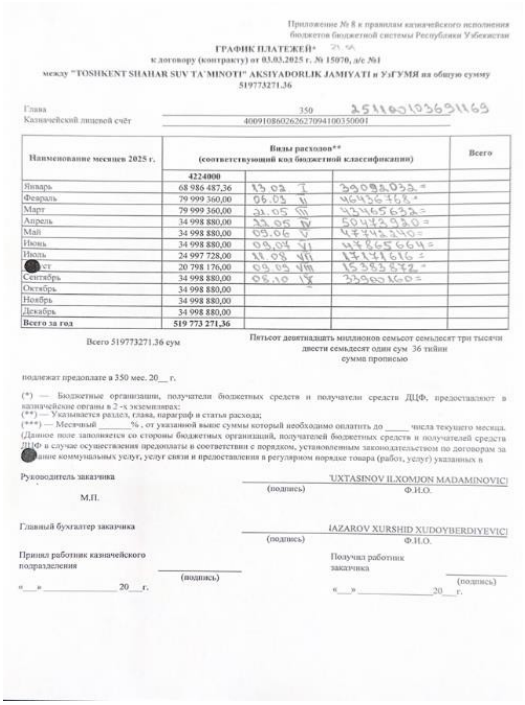

- **Utility metering and billing.** Volumes supplied to the University are metered at the building inlets and invoiced monthly by Tashkent City Water Supply JSC. The 2025 contract includes a month-by-month payment schedule that is used to cross-check recorded consumption.
- **Smart digital meters.** Following a campus-wide water infrastructure assessment in 2024, smart digital water meters were installed and connected to an internal monitoring platform supervised by the Technical Department, providing continuous readings and monthly analytical reports to the University Green Office.
- **Leak detection and reporting.** Unusual consumption detected by the meters, together with reports submitted by students and staff through the "Green Hotline" (website and Telegram), triggers inspection; maintenance personnel address reported leaks within 24 hours. Between January and September 2025, more than 58 leak incidents were resolved.
- **Annual reporting.** Monthly readings are consolidated into an annual water-use total. The University has published annual consumption reports on its SDG 6 webpage since 2021, when recorded consumption was 91,000 m^3.

Measurement element	Responsible unit	Frequency
Mains supply volume (utility meters)	Environment and Energy unit, Department of Administrative Affairs	Monthly
Reconciliation with utility invoices	Environment and Energy unit, Department of Administrative Affairs	Monthly
Smart-meter monitoring platform	Technical Department	Continuous; monthly report
Consumption analysis and reporting	Green Office	Monthly and annual

Recorded consumption

Annual totals compiled from metered and invoiced volumes show a steady reduction in mains water use as the University's water conservation measures have taken effect:

Academic year	Mains water used (m^3 per year)	Change on previous year
2023–2024	63,800	—
2024–2025	54,700	−14.3%
2025–2026	46,800	−14.4%
